Excerpt: .connected in the-grid circuit is called a C battery or bias battery. Since it supplies little or no current it may consist of the smallest size of flashlight cells. If more amplification is required than that given by one tube, the telephones of Fig. 3 may be taken out and the primary of another transformer connected in their place. The secondary of this transformer is connected to the grid and filament of another tube, which will amplify the results of the first tube. This action may be continued through four or five tubes in succession, and is known as cascade amplification. Very careful design is necessary in such multi-stage amplifiers in order to prevent distortion. The matter of howling in amplifier circuits can be entirely avoided. This subject will be taken up in the next article of this series, which will deal with the vacuum...
